transmitter, here operating on the 40 meter band. The design starts with a crystal oscillator. After building and testing this, we add a buffer amplifier.

Abstract for Experimental Methods in RF Design

An experiment is a procedure carried out to support, refute, or validate a hypothesis. Experiments provide insight into cause-and-effect by demonstrating what outcome occurs when a particular factor is manipulated. Experiments vary greatly in goal and scale, but always rely on repeatable procedure and logical analysis of the results.

Why a Scientific Format? The scientific format may seem confusing for the beginning science writer due to its rigid structure which is so different from writing in the humanities. One reason for using this format is that it is a means of efficiently communicating scientific findings to the broad community of scientists in a uniform manner.

How to Write Guide: Sections of the Paper - Bates College

Charles S. Peirce randomly assigned volunteers to a blinded, repeated-measures design to evaluate their ability to discriminate weights. Peirce's experiment inspired other researchers in psychology and education, which developed a research tradition of randomized experiments in laboratories and specialized textbooks in the 1800s.

Teaching Materials Using Case Studies by Claire Davis and Elizabeth Wilcock. A booklet in the 12 Guides to Lecturers series published by the UK Centre for Materials Education. This guide explores the use of the case-based approach to support engineering education and, more specifically, their role in Materials Science related Higher Education courses.

We show, via a massive (N = 689,003) experiment on Facebook, that emotional states can be transferred to others via emotional contagion, leading people to experience the same emotions without their awareness. We provide experimental evidence that emotional contagion occurs without direct interaction between people (exposure to a friend expressing an emotion is sufficient), and in the complete ...
