6. Water treatment 6. WATER TREATMENT 6.1 Introduction Water can be contaminated by the following agents: Pathogens – disease-causing organisms that include bacteria, amoebas and viruses, as well as the eggs and larvae of parasitic worms. Harmful chemicals from human activities (industrial wastes, pesticides, fertilizers).

### **6. Water treatment - WHO | World Health Organization**

Every community water supplier must provide an annual report, sometimes called a Consumer Confidence Report, or "CCR," to its customers. The report provides information on your local drinking water quality, including the water's source, contaminants found in the water, and how consumers can get involved in protecting drinking water.

Recycled water can satisfy most water demands, as long as it is adequately treated to ensure water quality appropriate for the use. EPA regulates many aspects of wastewater treatment and drinking water quality, and the majority of states in the US have established criteria or guidelines for the beneficial use of recycled water.

of water can cause dehydration (losing too much water in the body) and death. Not having enough water may be due to (dry weather for a long drought time), the high cost of water, or because water has not been well conserved. Contamination of water can make the effects of water scarcity worse, and likewise, water scarcity can make contamination more serious.

WATER HYACINTH CONTROL AND POSSIBLE USES Introduction Water hyacinth (Eichhornia Crassipes) Water hyacinth is an aquatic plant which can live and reproduce floating freely on the surface of fresh waters or can be anchored in mud. Plant size ranges from a few inches to a metre in height.

### **WATER HYACINTH CONTROL AND POSSIBLE USES**

A typical home reverse osmosis system consists of pretreatment and post-treatment filters as well as the RO membrane, flow regulator, storage container for the treated water, and dispensing faucet (Figure 3). The pressure for RO is usually supplied by the feed line pressure of the water system in the home, but a

routine daily water use. If there has not been recent daily water use, it could take two minutes or longer for the water to become cold. Your water utility can tell you if longer flushing times are needed if you do not get cold water in a few minutes. Do not boil water to remove lead. Boiling will not remove the lead. Use a filter.

### **Construction Activity Could Affect Your Drinking Water Quality**

7. Water supply 7.1 Water-supply preparedness and protection Water-supply problems arise in all phases of the disaster-management cycle. As with all other elements of emergency management, water supplies can be designed and main-tained in ways that help to reduce the health impacts of disasters.
