The State of the World's Land and Water Resources for Food and Agriculture This flagship report analyses a variety of options for overcoming constraints and improving resource management in areas of heightened risk.

Land & Water - Food and Agriculture Organization

With 189 member countries, staff from more than 170 countries, and offices in over 130 locations, the World Bank Group is a unique global partnership: five institutions working for sustainable solutions that reduce poverty and build shared prosperity in developing countries.

Water Home - worldbank.org

Water resources are natural resources of water that are potentially useful. Uses of water include agricultural, industrial, household, recreational and environmental activities. All living things require water to grow and reproduce. 97% of the water on the Earth is salt water and only three percent is fresh water; slightly over two thirds of this is frozen in glaciers and polar ice caps.

Water resources - Wikipedia

This section introduces a range of climate-smart agriculture (CSA) practices and technologies within seven entry points for CSA; soil management, crop management, water management, livestock management, forestry, fisheries and aquaculture, and energy management. Practices are understood broadly as ways of doing things, for example, precision farming, tillage, and fertilization; these are all ...

With water quickly becoming a scarce resource, market innovations are changing the way we use it.

In deep water: Water economy is threatened by climate

Water Resources Management (WRM) in Chile is widely known for its 1981 Water Codeâ€”written after General Augusto Pinochet took control through a military coup d'Ã©tat. Free-market mechanisms became the economic philosophy in WRM, including the development of water markets and tradable water permits. A major reform to the 1981 Water Code was signed in 2005 to address social equity and ...

Assessment and Action Plan REPORT 1 - City of New York

Developing countries face a difficult challenge in meeting the growing demands for food, water, and energy, which is further compounded by climate change. Effective adaptation to change requires the efficient use of land, water, energy, and other vital resources, and coordinated efforts to minimize trade-offs and maximize synergies. However, as in many developing countries, the policy process ...
