America's Wetlands. Wetlands are areas where water covers soil all or part of the time. Wetlands are important because they protect and improve water quality, provide fish and wildlife habitats, store floodwaters and maintain surface water flow during dry periods.

## **Wetlands Protection and Restoration | US EPA**

A wetland is a distinct ecosystem that is inundated by water, either permanently or seasonally, where oxygen-free processes prevail. The primary factor that distinguishes wetlands from other land forms or water bodies is the characteristic vegetation of aquatic plants, adapted to the unique hydric soil. Wetlands play a number of functions, including water purification, water storage, processing ...

Wetland Engineer *Castor canadensis*, the American Beaver, a Wetland Ecosystem Engineer. By Thomas J. Slabe. Wetlands throughout most of North America are highly correlated with the American beaver (*Castor canadensis*), which before European settlement numbered between 60 - 400 million (Seton, 1929). Today beavers number at around 6 - 12 million (Naiman et al., 1988).

An infiltration basin (also known as a recharge basin or in some areas, a sump or percolation pond), is a type of device that is used to manage stormwater runoff, prevent flooding and downstream erosion, and improve water quality in an adjacent river, stream, lake or bay. It is essentially a shallow artificial pond that is designed to infiltrate stormwater through permeable soils into the ...
